I have a garage electric heater (without thermostat) which I want to wire to a thermostat. The heater is rated 240 volt, 5000 Watt. First, can you suggest any particular thermostat that will handle this line load (I've only been able to find ones that handle up to approx. 3800 Watts) and, lastly, the correct wiring procedure.

Hi! It sounds like the contactor is not getting enough voltage to the coil. I would suggest that you check the coil voltage and make sure it is getting a minimum of 24 volts if it is a 24-volt coil and 220 volts if you have a 220-volt coil.

### **Problem: Why I am not getting 24 volts to the contactor**
